

Interview Task

Create a reactjs project for listing and editing users, the main page is the listing with a table containing users fetched from backend with option to view/edit each user and filtering by name, also the table must be paginated.

The second page is where user info is displayed and edited for update.

Use the below swagger as your backend API documentation and endpoints for listing and fetch user

Use this swagger as documentation for backend APIs <https://reqres.in/api-docs/#/default>

APIs to use

- List Users: <https://reqres.in/api/users>
- Fetch/Update User: <https://reqres.in/api/users/3>

Points to notice

- Your reactjs project structure.
- Data passing/sharing between top level and child components.
- How service APIs are invoked and reused (tip: custom hooks)
- Share task via your GitHub account and ensure the commits history shows the progress of your work.
